

RUN POWER DIRECT FROM YOUR BATTERY

DOMETIC HWK-DC DC HARDWIRING KIT

The Dometic Hardwiring Kit - DC includes everything you need to run power direct from your battery to anywhere in the vehicle. Two output socket types - one standard and Dometic's 2-pin threaded connection provide DC voltage for your portable fridge/freezer or other 12V/24V devices. You can count on the heavy duty 10AWG wiring to bring steady power to the rear of your vehicle with minimal voltage drop. The housing provides options for surface or panel mounting with covers on each socket for safety when not in use. Update the old wiring in your vehicle or bring power to a more convenient location.

FEATURES

- 10AWG cable with eyelets & 15 A blade fuse, 6 m
