# Simple Battery Meter & Monitor Guide

Off you go in your caravan, camper, boat or 4WD, ready for the good times and all hooked up with the appropriate battery system. But wait. Have you got the right battery meter or monitor to keep the good times going? From simple and inexpensive to microprocessor controlled with alarms and other extras, here's a guide to help you choose wisely.

## DC 12V Volt Meter

This is your basic meter: no bells and whistles, but no big price tag either. It gives you a reading of the current voltage on your battery. If you want an inexpensive, easy-to-install, basic meter, this is the one to choose.

Available in a wide range of housing, including our upcoming triple mount housing.

## Baintech Volt/Amp Meter

These meters are very versatile. They cost a little bit more than a simple volt meter and they give you a flexible range of combinations to choose from – Volt/Amp, Volt/Volt and Amp/Amp – which means there's sure to be one which suits your needs.

**The Volt/Volt Meter** displays the state of charge for two of your batteries in real time.

**The Volt/Amp Meter** displays your battery's state of charge and the current being drawn from your battery in real time.

**The Amp/Amp Meter** can be used to show the current pulled from your battery by your appliances and the current coming into your battery from a charger. You can also use the Amp/Amp meter to display the current from two separate batteries.

## Victron Battery Monitors

This takes all the guesswork out of your battery capacity and charge by calculating volts, amps, state of charge and time remaining. If you are prepared to pay a bit more for convenience and accuracy, and you're okay with doing some basic programming when you install it, this is the one to choose.

# You can also find our meters and monitors in our versatile panel range

That 12v cigarette dash outlet in your 4WD isn't going to be enough to power up your mobile phone, your GPS and your IPOD when you're on the road.

It definitely won't keep your power-hungry fridge running reliably enough to ensure you have icy cold bevies to enjoy at the end of a hard days' adventuring. Let's face it, if you've only got that dash outlet, you'll just need to cut back on the 12v appliances you take on your travels.

But there is a solution! Sleek, affordable and pre-wired so they're virtually foolproof to self-install, Baintech's power Panels let you charge and power multiple 12V appliances when you take off on your 4WD adventure - so you don't have to leave any of them at home!

With a strong commitment to complete customer care, Bainbridge Technologies' expert power system solutions are all backed with 2 years warranty and an expert in-house service team to help with any after sales service support.
